

Index to 1959 ASTRONAUTICS (Vol. 4)

SUBJECTS

ARPA

- Year II of the space age, Feb., p. 44.
- NASA-ARPA re-entry detection research, Aug., p. 29.
- ARPA—Military space research agency, Aug., p. 35.
- Military space program for 1960, Nov., p. 26.

ARS

- Stapp heads ARS for 1959, Jan., p. 34
- ARS on amateur rocketry, June, p. 34.
- On Portola's ground, Semi-annual meeting, July, p. 47.
- ARS Sections meet the challenge of amateur rocketry, Sept., p. 35.
- Washington welcomes ARS, 14th Annual Meeting, Nov., p. 52.
- The technical program: A look ahead, Nov., p. 61.

ASTRONOMY

- Is Newton's law of gravitation really universal?, Jan., p. 18.
- Rocket astronomy—Window into space, Jan., p. 26.
- Instant rocketry eclipse expedition, Jan., p. 28.
- Mars—A world for exploration, Jan., p. 30.
- Radar contact with Venus, May, p. 50.
- Could satellites of Mars be artificial?, Dec., p. 38.

ASTROPHYSICS

- The sun and the upper atmosphere, July, p. 20.
- Density and temperature of the upper atmosphere, July, p. 24.
- Positive ions in the ionosphere, July, p. 30.
- Artificial modification of the upper atmosphere, July, p. 46.
- Astrodynamics, state of the art, Nov., p. 30.
- Physics of the atmosphere and space, state of the art, Nov., p. 43.

COMMUNICATIONS

- Communicating with the hypersonic vehicle, March, p. 36.
- Radio allocations for Astronautics, part 1, March, p. 78; part 2, April, p. 18.
- A 960-mc lunar transmitter, May, p. 29.
- Score—First communications satellite, May, p. 37.
- Miniature movies of the planets, May, p. 26.
- Radar contact with Venus, May, p. 50.
- Radio guidance of vehicles into space, June, p. 20.
- Approach to the ionosphere, July, p. 27.
- Antennas for space vehicles, July, p. 44.
- Orbital post office, Aug., p. 38.
- Parametric amplifier in space-probe tracking, Aug., p. 40.
- ITU conferences and astronomical radio allocations, Nov., p. 20.
- State of the art, Nov., p. 31.
- Mercury capsule communication, Dec., p. 24.

EDUCATION

- Educating the amateur rocketeer, April, p. 33.
- ARS on amateur rocketry, June, p. 34.
- ARS Sections meet the challenge of amateur rocketry, Sept., p. 35.
- State of the art, Nov., p. 32.

GUIDANCE

- Interplanetary probes: Three problems, Jan., p. 20.
- Introduction to space navigation, Jan., p. 23.
- Attitude control for space vehicles, March, p. 34.
- Miniaturized Digital Computing Systems, May, p. 42.
- Radio guidance of vehicles into space, June, p. 20.
- State of the art, Nov., p. 33.

HUMAN FACTORS

- Preparing man for spaceflight, Feb., p. 18.
- Isolation, Feb., p. 22.
- Biodynamics of spaceflight, Feb., p. 24.
- Weightlessness and spaceflight, Feb., p. 26.
- Selecting a space cabin atmosphere, Feb., p. 28.
- Psychophysiological aspects of Manhigh, Feb., p. 32.
- Water recovery in space cabin, Feb., p. 34.

- A closed-cycle breathing/ventilation system, Feb., p. 36.
- Acceleration: How great a problem?, Feb., p. 38.
- Hazards of sealed cabins, Feb., p. 40.
- They float through the air, Feb., p. 42.
- Medical electronics—Black bag in space, June, p. 26.
- Keeping your feet on the ground—In space, June, p. 28.
- Preparing for manned spaceflight, June, p. 29.
- Able-Baker—Astronauts, July, p. 48.
- Training an Astronaut, Sept., p. 31.
- State of the art, Nov., p. 34.
- Synthesis of storable rocket fuel during space missions, Dec., p. 32.

HYPERSONICS

- Hypersonic aerodynamics, part 1, March, p. 24; part 2, April, p. 34.
- Dynamic stability of re-entry vehicles, March, p. 32.
- Attitude control for space vehicles, March, p. 34.
- Communicating with the hypersonic vehicle, March 1959, p. 36.
- Arc-heated plasma for laboratory hypersonics, March, p. 40.
- A future for hypersonic ramjets, April, p. 38.
- State of the art, Nov., p. 35.
- JPL's new hypersonic wind tunnel, Dec., p. 46.

IGY

- Instant rocketry, eclipse expedition, Jan., p. 28.
- What we have learned from Project Vanguard, April, p. 28.
- Project Hugo, meteorological, June, p. 41.
- The sun and the upper atmosphere, July, p. 20.
- Density and temperature of the upper atmosphere, July, p. 24.
- Approach to the ionosphere, July, p. 26.
- Measuring upper-air structure, July, p. 28.
- Positive ions in the ionosphere, July, p. 30.
- Pioneer's radiation-detection instrument, July, p. 32.

INSTRUMENTATION AND CONTROLS

- Ramjet fuel-air control, April, p. 42.
- Microminiaturized payloads open paths for space research, May, p. 20.
- Midget payloads for giant missions, May, p. 21.
- Designing small space payloads, May, p. 24.
- A 960-mc lunar transmitter, May, p. 29.
- Piggyback missile research packages, May, p. 32.
- Micromodules make their bow, May, p. 34.
- Score—First communications satellite, May, p. 37.
- Microminiaturization in a space vehicle frequency standard, May, p. 40.
- Miniaturized digital computing systems, May, p. 42.
- Beyond microminiaturization: Integrated electronics, May, p. 44.
- What price microminiaturization?, May, p. 46.
- Medical electronics—Black bag in space, June, p. 26.
- Approach to the ionosphere, July, p. 26.
- Measuring upper-air structure, July, p. 28.
- Pioneer's radiation-detection instrument, July, p. 32.
- State of the art, Nov., p. 36.
- Mercury capsule communications, Dec., p. 24.

MAGNETOHYDRODYNAMICS

- Applications of magnetofluidmechanics, Oct., p. 30.
- Gas dynamics symposium, Oct., p. 55.
- State of the art, Nov., p. 40.

MATERIALS AND PROCESSES

- Behavior of materials in space, June, p. 32.
- Laboratory and nonthrust rockets, Sept., p. 28.
- Designing an ICBM nose-cone liner, Sept., p. 38.
- Structures and materials, state of the art, Nov., p. 49.

METEOROLOGY

- Weather reconnaissance by satellites, Jan., p. 32.
- View from above, June, p. 41.
- Project Hugo, June, p. 41.

- Ring in the future, Explorer VII, Dec., p. 30.

MICROMINIATURIZATION

- Microminiaturized payloads open paths for space research, May, p. 20.
- Midget payloads for giant missions, May, p. 21.
- Designing small space payloads, May, p. 24.
- Miniature movies of the planets, May, p. 26.
- A 960-mc lunar transmitter, May, p. 29.
- Piggyback missile research packages, May, p. 32.
- Micromodules make their bow, May, p. 34.
- Score—First communications satellite, May, p. 37.
- Microminiaturization in a space vehicle frequency standard, May, p. 40.
- Miniaturized digital computing systems, May, p. 42.
- Beyond microminiaturization: Integrated electronics, May, p. 44.
- What price microminiaturization?, May, p. 46.
- Ring in the future, Explorer VII, Dec., p. 30.

MISSILES

- Nature of re-entry, March, p. 20.
- Hypersonic aerodynamics, part 1, March, p. 24; part 2, April, p. 34.
- Design and fabrication of a re-entry vehicle, March, p. 26.
- Heat protection for re-entry vehicles, March, p. 28.
- Planning a re-entry and recovery test program, March, p. 30.
- Dynamic stability of re-entry vehicles, March, p. 32.
- Attitude control for space vehicles, March, p. 34.
- Re-entry: Problems and progress, March, p. 38.
- Testing a Titan, Aug., p. 26.
- NASA-ARPA re-entry detection research, anti-missile, Aug., p. 29.
- Designing an ICBM nose-cone liner, Sept., p. 38.
- Missile and space-vehicle design, state of the art, Nov., p. 41.

NASA

- Year II of the space age, Feb., p. 44.
- Capsule for man in space, Feb., p. 30.
- Fact sheet on Project Mercury, March, p. 43.
- The Mercury Astronauts, June, p. 22.
- Progress on Project Mercury, June, p. 30.
- NASA budget up for fiscal 1960, June, p. 40.
- NASA space science program, July, p. 36.
- Able, Baker—Astronauts, July, p. 48.
- NASA-ARPA re-entry detection research, Aug., p. 29.
- NASA—Men and giant rockets, Aug., p. 32.
- Training an Astronaut, Sept., p. 31.
- NASA program for 1960, Nov., p. 24.
- NASA age one, Dec., p. 40.

PATENTS

- Rocket motor decelerates aerial mine, Jan., p. 96.
- Stabilizing a missile fired rearward from aircraft, Jan., p. 97.
- Attitude control for space vehicles, Feb., p. 94.
- Rocket stabilized by rotation of engine, Feb., p. 94.
- Portable ground cover protects launching sites, April, p. 94.
- ITT labs president receives four patents, April, p. 94.
- Aerodynamic wave machine, May, p. 108.
- Controlled liquid propellant feed system, May, p. 108.
- Liquid rocket fuel with low freezing point, May, p. 109.
- Spaceship air conditioning, May, p. 109.
- Rocket grain seal projects thin motor tubing, Aug., p. 76.
- Solar energy converter, Aug., p. 76.
- Compound-curvature regenerative cooling, Nov., p. 128.
- Aerodynamic control of a rocket, Nov., p. 128.

POWER SYSTEMS

- Auxiliary power for space probes, Aug., p. 30.
- State of the art, Nov., p. 44.
- Spacecraft power from open-cycle chemical turbines, Dec., p. 36.

PROPELLANTS

- Astronautics data sheet, chlorine trifluoride (ClF₃), Sept., p. 80.
- Free-radical fuels—A tough problem, Oct., p. 44.
- Canned liquid-rocket engines, Oct., p. 37.
- Hybrid propulsion systems, Oct., p. 42.
- Astronautics data sheet, unsymmetrical dimethyl hydrazine (UDMH)—(CH₃)₂NNH₂, Nov., p. 76.
- Propellants and combustion, state of the art, Nov., p. 45.
- Water rockets, Dec., p. 42.

PROPULSION

- Monopropellant air-turbo-rocket, April, p. 36.
- Future for hypersonic ramjets, April, p. 38.
- Ramjet trends, April, p. 40.
- Ramjet combustion, April, p. 44.
- Nova—A manned lunar rocket, Sept., p. 20.
- Space propulsion system profiles, Sept., p. 24.
- Laboratory and nonthrust rockets, Sept., p. 28.
- Advanced reactor concepts for nuclear propulsion, Oct., p. 20.
- Gaseous-core nuclear rockets, Oct., p. 23.
- Solid-core nuclear-rocket design, Oct., p. 26.
- Boundary conditions for nuclear propulsion, Oct., p. 28.
- Boundary conditions for nuclear propulsion, Oct., p. 28.
- Plasma propulsion of spacecraft, Oct., p. 31.
- Cesium-ion propulsion, Oct., p. 34.
- Photon rocket propulsion, Oct., p. 36.
- Canned liquid-rocket engines, Oct., p. 37.
- Variable-thrust rocket engines, Oct., p. 40.
- Hybrid propulsion systems, Oct., p. 42.
- Ion propulsion, state of the art, Nov., p. 37.
- Nuclear propulsion, state of the art, Nov., p. 42.
- Liquid rockets, state of the art, Nov., p. 38.
- Propellants and combustion, state of the art, Nov., p. 45.
- Solid rockets, state of the art, Nov., p. 47.
- Underwater propulsion, state of the art, Nov., p. 51.
- Water rockets, Dec., p. 42.

RAMJET

- Monopropellant air-turbo-rocket, April, p. 36.
- Future for hypersonic ramjets, April, p. 38.
- Ramjet trends, April, p. 40.
- Ramjet fuel-air control, April, p. 42.
- Ramjet combustion, April, p. 44.
- Supersonic ramjet diffuser design, April, p. 46.
- Supersonics, state of the art, Nov., p. 46.
- Solid-fuel ramjets, Dec., p. 44.

RE-ENTRY

- Nature of re-entry, March, p. 20.
- Re-entry heat transfer, March, p. 22.
- Design and fabrication of a re-entry vehicle, March, p. 26.
- Heat protection for re-entry vehicles, March, p. 28.
- Planning a re-entry and recovery test program, March, p. 30.
- Dynamic stability of re-entry vehicles, March, p. 32.
- Re-entry: Problems and progress, March, p. 38.
- Techniques for space vehicle recovery, June, p. 23.
- Drag brake for manned satellite recovery, July, p. 34.
- NASA-ARPA re-entry detection research, Aug., p. 29.

SATELLITES

- Weather reconnaissance by satellites, Jan., p. 32.
- Earth satellite orbit, Jan., p. 40.
- Capsule for man in space, Feb., p. 30.
- Fact sheet on Project Mercury, March, p. 43.
- Japanese wonder: Is Mehta really a dream?, March, p. 80.
- What we have learned from Project Vanguard, April, p. 28.
- Score—First communications satellite, May, p. 37.
- Drag brake for manned satellite recovery, July, p. 34.
- Manned outposts in space, Aug., p. 20.
- Orbital post office, Aug., p. 38.
- Russia's Project Farside, Dec., p. 28.
- Ring in the future, Explorer VII, Dec., p. 30.

SOCIOLOGY

- Science, weapons, and civilization, Aug., p. 24.
- Sociology and the Space Age, Sept., p. 36.
- Man's mission in space, Nov., p. 28.
- Space law and sociology, state of the art, Nov., p. 48.

SPACEFLIGHT

- Interplanetary probes: Three problems, Jan., p. 20.
- Introduction to space navigation, Jan., p. 23.
- Mars—A world for exploration, Jan., p. 30.
- Preparing man for spaceflight, Feb., p. 18.
- Capsule for man in space, Feb., p. 30.
- Acceleration: How great a problem?, Feb., p. 38.
- Hazards of sealed cabins, Feb., p. 40.
- Nature of re-entry, March, p. 20.
- Progress on Project Mercury, June, p. 30.
- Manned outposts in space, Aug., p. 20.
- Nova—A manned lunar rocket, Sept., p. 20.
- Commercially feasible spaceflight, Sept., p. 32.
- Man's mission in space, Nov., p. 28.
- Synthesis of storable rocket fuel during space missions, Dec., p. 32.

SPACE VEHICLES

- Attitude control for space vehicles, March, p. 34.
- Capsule for man in space, Feb., p. 30.
- Fact sheet on Project Mercury, March, p. 43.
- Microminiaturized payloads open paths for space research, May, p. 20.
- Microminiaturization in a space vehicle frequency standard, May, p. 40.
- Designing small space payloads, May, p. 24.
- Radio guidance of vehicles into space, June, p. 20.
- Techniques for space vehicle recovery, June, p. 23.
- Progress on Project Mercury, June, p. 30.
- Antennas for space vehicles, July, p. 44.
- Auxiliary power for space probes, Aug., p. 30.
- Nova—A manned lunar rocket, Sept., p. 20.
- Commercially feasible spaceflight, Sept., p. 32.
- Spacecraft power from open-cycle chemical turbines, Dec., p. 36.

STATE OF THE ART, 1959

- Aerodynamics, Nov., p. 30.
- Communications, Nov., p. 31.
- Education, Nov., p. 32.
- Guidance and navigation, Nov., p. 33.
- Human factors and bio-astronautics, Nov., p. 34.
- Hypersonics, Nov., p. 35.
- Instrumentation and controls, Nov., p. 36.
- Ion propulsion, Nov., p. 37.
- Liquid rockets, Nov., p. 38.
- Logistics and operations, Nov., p. 39.
- Magnetohydrodynamics, Nov., p. 40.
- Missile and space-vehicle design, Nov., p. 41.
- Nuclear propulsion, Nov., p. 42.
- Physics of the atmosphere and space, Nov., p. 43.
- Power systems, Nov., p. 44.
- Propellants and combustion, Nov., p. 45.
- Ramjets, Nov., p. 46.
- Solid rockets, Nov., p. 47.
- Space law and sociology, Nov., p. 48.
- Structures and materials, Nov., p. 49.
- Test facilities and support equipment, Nov., p. 50.
- Underwater propulsion, Nov., p. 51.

SOVIET ASTRONAUTICS

- Open letter to the U.S.S.R., Feb., p. 16.
- Soviet biological experiments, Feb., p. 31.
- Keeping up to date on Soviet astronautics, April, p. 30.
- Mehta radiation data, July, p. 23.
- Soviet astronautical program, July, p. 43.
- Russia's Project Farside, Dec., p. 28.

TESTING

- Preparing man for spaceflight, Feb., p. 18.
- Planning a re-entry and recovery test program, March, p. 30.
- What we have learned from Vanguard, April, p. 28.
- Measuring upper-air structure, July, p. 28.
- Testing a Titan, Aug., p. 26.
- Designing an ICBM nose-cone liner, Sept., p. 38.
- Test facilities and support equipment, state of the art, Nov., p. 50.
- JPL's new hypersonic wind tunnel, Dec., p. 46.

THERMODYNAMICS

- Re-entry heat transfer, March, p. 22.
- Heat protection for re-entry vehicles, March, p. 28.
- Arc-heated plasma for laboratory hypersonics, March, p. 40.

TRACKING

- Parametric amplifier in space-probe tracking, Aug., p. 40.
- Radar contact with Venus, May, p. 50.
- Radio guidance of vehicles into space, June, p. 20.

MISCELLANEOUS

- Three astronautical pioneers: Goddard, April, p. 24; Tsiolkovskii, May, p. 48; Oberth, June, p. 38.
- Robert H. Goddard, an autobiography, April, p. 24.
- K. E. Tsiolkovskii, an autobiography, May, p. 48.
- The Mercury Astronauts, June, p. 22.
- Hermann Oberth, an autobiography, June, p. 38.
- Von Braun tribute to Goddard, June, p. 36.
- Dedication of Goddard Wing of Roswell (N.M.) Museum and Art Center, June, p. 36-37.
- It's a Goddard Year, June, p. 37.
- ARS plans Goddard Memorial, June, p. 37.
- Astronautics decimal classification, Sept., p. 40.
- Sedov heads IAF for 1960, Oct., p. 116.

AUTHORS

- ALDRICH, JOSEPH M.
ARS Sections meet the challenge of amateur rocketry, Sept., p. 34.
- BAKER, STUART C. and KELSO, JOHN M.
Miniature movies of the planets, May, p. 26.
- BAKER JR., ROBERT M. L., see HERRICK, SAMUEL
- BAMBEK, R. A. and ZEFF, J. D.
Water recovery in a space cabin, Feb., p. 34.
- BERNING, WARREN W.
Approach to the ionosphere, July, p. 26.
- BREITWISER, ROLAND
Ramjet combustion, April, p. 44.
- BROWN, LAWRENCE S.
Guidance and navigation, Nov., p. 33.
- BUSSARD, ROBERT W.
Boundary conditions for nuclear propulsion, Oct., p. 28.
- CAMAC, MORTON
Plasma propulsion of spacecraft, Oct., p. 31.
- CHATELAIN, MAURICE G.
Antennas for space vehicles, July, p. 44.
- CHUDAKOV, A. YE., see VERNOV, S. N.
- CLARK, CARL C. and HARDY, JAMES D.
Preparing man for spaceflight, Feb., p. 18.
- CLAUSER, MILTON U.
Magnetohydrodynamics, Nov., p. 40.
- COLE, DANBRIDGE M.
Commercially feasible spaceflight, Sept., p. 32.
- COLICHMAN, EUGENE L.
Synthesis of storable rocket fuel during space missions, Dec., p. 32.
- CORLISS, WILLIAM R.
Space propulsion system profiles, Sept., p. 24.
- COVER, H. E.
ARS Sections meet the challenge of amateur rocketry, Sept., p. 35.
- DAVIS, MARSHALL I. and KRASSNER, GEORGE N.
Score—First communications satellite, May, p. 37.
- DEGIACOMO, LT. COL. GENE M.
Piggyback missile research packages, May, p. 32.
- DETRA, R. W., KANTROWITZ, A. R., RIDDELL, F. R., and ROSE, P. H.
Drag brake for manned satellite recovery, July, p. 34.
- DONALDSON, COLEMAN
Re-entry: Problems and progress, March, p. 38.
- DORRANCE, WILLIAM H.
Hypersonics, Nov., p. 35.
- DOW, NORRIS F.
Heat protection for re-entry vehicles, March, p. 28.
- DUGGER, GORDON L.
A future for hypersonic ramjets, April, p. 38.
- DURHAM, FRANKLIN P.
Solid-core nuclear-rocket design, Oct., p. 26.
- EHRLICH, KRAFFT
Interplanetary probes: Three problems, Jan., p. 20.
- Manned outposts in space, Aug., p. 20.
- FARNHAM, LEON L.
Design and fabrication of re-entry vehicle, March, p. 26.
- FERNANDEZ, MANUEL
An introduction to space navigation, Jan., p. 23.

CENTRAL COMPRESSION SYSTEMS

New data book and catalog belongs in your files . . . when you are planning, designing or specifying high pressure air and gas facilities. Includes description and engineering data sheets on new or improved CARDAIR (formerly Cardox) Central Compression Systems—now used by prime contractors, suppliers of missile components and controls, testing laboratories . . . wherever high pressure —100° F. dew point (less than 4 ppm oil content) air, helium or nitrogen is required.

Systems are designed for any degree of purification. Wide range of models, skid-based fixed or mobile,—pressure ranges from 4,000 to 12,000 psi—50 to 150 SCFM. Completely engineered systems or package units. Backed by 15 years' successful performance in high pressure (12,000 psi) gases, including Mil Specs. District offices and warehouses throughout country. Mail coupon today.

AIRDIX CARDIX PRODUCTS COMPANY
High Pressure Pneumatics Division
307 N. Michigan Ave., Chicago 1, Ill.
Please send new catalog and data file on
CARDAIR Central Compression Systems.

Name Address Company City Zone State

Western States Distributor:
General Air Equipment
824 Hollywood Way, Burbank, Cal.
